

Name: Dr. Dominic Cunliffe

Position in IPLA: Research and Innovation Lead

Job Role: Academic Course Lead (MA Physical Education & School Sport; BA(Hons) Physical Education; BA(Hons) Sport Coaching & Physical Education .

Qualifications: PhD, PGCE, PGCRM, SFHEA

Areas of interest: My research focuses on the phenomena of children's learning within the physical environment, especially the pedagogic approaches employed within schools which support the cognitive and holistic developments of the individual child. My seminal work has seen a positive impact on the teaching, assessment and learning of children within physical education. I have published several peer reviewed articles related to learning within physical education, including the use of technology and the promotion of physical literacy beyond the classroom. My vision is to support all members of the IPLA in our objective to raise awareness and the need for a deeper understanding of physical literacy. I am working diligently to draw a critical mass of experts, allowing for opportunities to liaise with key personnel and encourage the application of research and scholarly activity to drive policy and practice on a global level. In turn, I hope that we shall improve the quality and quantity of research papers for open access, and ensure the sustainability and preservation of the integrity of physical literacy. Please see our Research & Innovation section on the website for more information.
